> The tc:one Terminals

The elegant answer.

The more comprehensively and efficiently the retailer can answer a client's enquiries, the stronger the customer loyalty and trust they will receive in return. Effective use of electronic media strengthens the client's impressions of competence, thus increasing the opportunities for successful sales conversions.

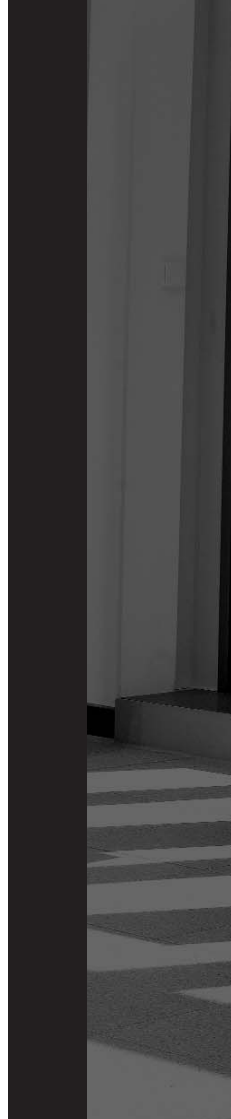

Food for thought.

Human nature dictates that wherever we go, whatever we do, we are programmed to instinctively seek new information. Here's a pleasant thought - why not savour a leisurely browse of the internet before the first course is served?

A classy reception.

You can judge a good hotel by its lobby. It is the focal point of all good establishments, where guests can find both relaxation and information seamlessly combined together.

A meeting of minds.

Business meetings take a long time out of your day. A quick chat in the hallway is often a much more efficient way of communicating, especially if there's a convenient terminal to immediately access the information you need.

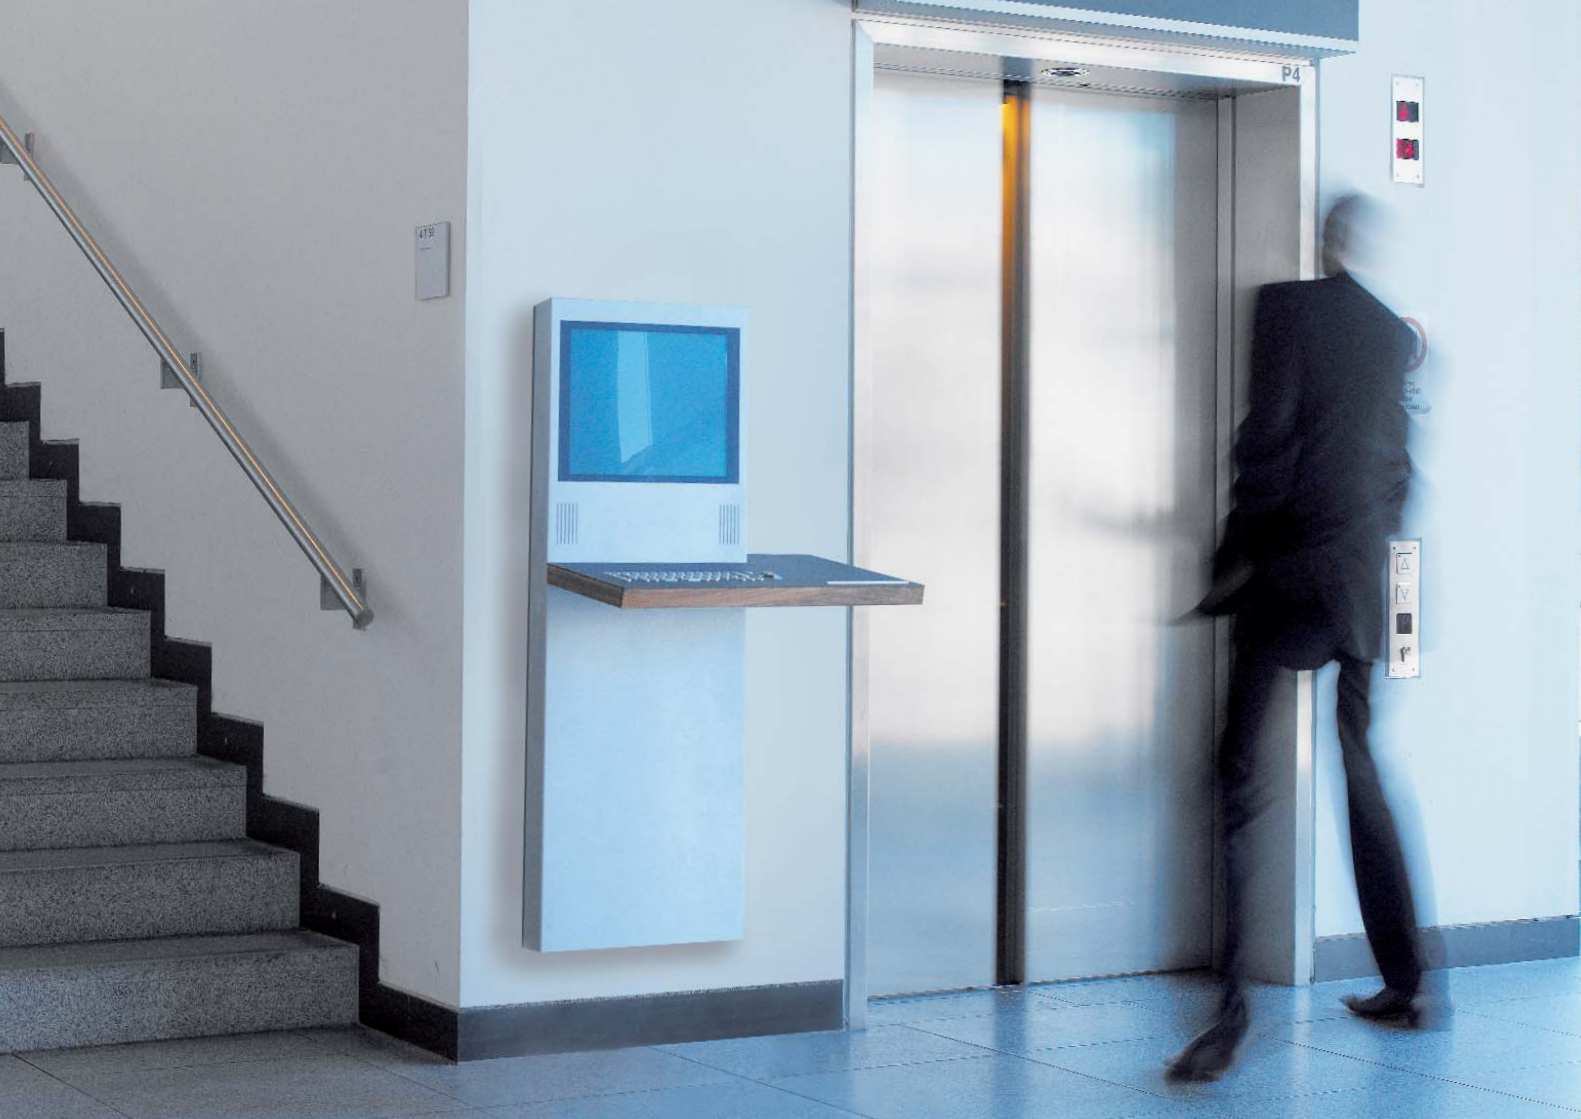

Directions by design.

Turn left, take the fourth door on the right, follow the aisle, take the lift to the first floor, go to the blue swing doors, turn immediately left behind them and continue until the aisle bends slightly to the right and it's the sixth door on your left.

There is a better way.

Making the connection.

People travel, information travels. tc:one brings the two together.

tc:one - at check-in >

For information to be of use, it must first reach its target. Quickly, clearly and precisely. Its delivery must be flexible and tailored to its environment. It must be simple to understand and pleasingly presented. For optical and acoustic information delivery, the tc:one is as instinctive as it is intelligent. As beautiful as it is robust.

Design. tc:one is the pinnacle of style in communications and information systems.

Each terminal comes ready equipped with hardware and software from the world's most trusted names, integrated into a fully self-contained and user-friendly enclosure. Ease of maintenance is assured by full access to the terminal subsystems through the rear door on the stand-alone version, or a front access hatch on the wall-mounted version.

All surfaces can be branded to individual specifications by the application of a special hardwearing powder coating, and the column and keyboard panel can be imprinted with any corporate identity or information desired.

tc:one terminals are available with or without the keyboard panel, which acts as a work area and can be fitted with either a standard or a purpose made stainless steel keyboard. The information display screen is flush-mounted into the front panel and encased in special antireflection protective glass.

Individuality. tc:one adapts to your application.

The tc:one puts you in control. You decide how interactive your terminal should be. You decide whether you want it with or without keyboard. With an LCD-flat screen or an intelligent touch-screen, infomedia keeps all your options open. When linked to a network or the Internet, tc:one can be

remotely controlled from anywhere in the world and adapted to an almost endless variety of applications.

Quality. The infomedia service.

When you decide on an infomedia product you will receive a full 24 month warranty on all subsystems and hardware components - including on-site exchange of products or modules within our next-day-swap service. So infomedia can always ensure the absolute maximum up-times for your systems, even on weekends and bank holidays. It goes without saying that we can also offer you a full range of services, from upgrades, product configuration and technical support, on demand.

Active loudspeakers.

*With or without
keyboard panel, available
in a variety of different
woods and metals.*

*Water-resistant stainless
steel keyboard, built to your
specifications.*

*Also available without
keyboard.*
