

## drapilux GmbH

Progress, style and safety

We are committed to progress. Now as ever. As a subsidiary of the Schmitz-Werke organization, we value both tradition and technical innovation, and we strive to bring new benefits to our customers.

- from curtains to wall coverings, and from upholstery fabrics to bed throws – drapilux stands for textiles of exceptional design quality
- drapilux inspires the confidence to express individual styles with designs and colours which emphasize their individuality – from care homes and clinics to luxury hotels, and from schools to cruise liners and office environments
- our permanent flame-retardant drapilux fabrics allow interiors to be designed to meet specific requirements. These fabrics can be supplied with specific properties as necessary, including the ability to insulate against sound, deodorize and break down contaminants or eliminate bacteria

## drapilux flammstop

Based on Trevira CS

The development of a generation of exceptionally flame-resistant fabrics was one of the milestones in the history of our progress-oriented company. As pioneers in the development of flame-retardant materials, as the first user of Trevira CS as long ago as 1980 we set new standards in the world of decorative fabrics.

- drapilux flammstop drapery and upholstery fabrics meet the highest safety standards in all areas of life and work. The outstanding level of safety is documented in general test certificates in accordance with all national and international standards
- the modified polyester fibres render the fabrics permanently flame-resistant and produce only minimal fumes in the event of a fire
- flame-resistance is not diminished either through use or by washing or aging

# drapilux

## drapilux air

Fresh air in every field of life and work

drapilux air fabrics with the "Triple Fresh" catalyzer have the ability to catalytically break down harmful substances and significantly reduce unpleasant odours. Unlike conventional fabrics, odours and contaminants are not absorbed but are instead converted into natural, non-toxic substances and degraded.

- in contrast to other odour-retardant fabrics on the market, the catalytic action of this new kind of textile is not dependent on the presence of UV light – it even works in total darkness
- noticeably cleaner and fresher air – around the clock the room is free of harmful contaminants and odours

## drapilux bioaktiv

Safety fabrics with antibacterial action

drapilux bioaktiv has a lasting antibacterial action which ensures enhanced quality and efficiency wherever room hygiene is of paramount importance. Silver ions permanently locked into the fibres reliably and effectively decimate bacteria on the surface of the fabric, without causing irritation or allergic reactions on contact with the skin.

- lasting antibacterial action which is not diminished even by washing
- costs are reduced thanks to extended intervals between washes – no need for disinfectants
- lasting protection against the development and transmission of germs

## drapilux akustik

A sound balance of wellbeing

High ceilings, spacious rooms and smooth floors are all typical features of modern architecture. They offer visual appeal, but there are disadvantages as well. The resonance of a room is often substantially increased, with the result that noise levels become unpleasant.

- drapilux akustik fabrics have specific and effective sound insulating properties which substantially ease potential noise nuisance
- drapilux akustik offers the ideal solution for every property, not to mention the sound insulation classes of the individual fabrics
- noise is not just a nuisance – it can also cause ill health. Using drapilux akustik helps to offset the adverse effects on personal efficiency and wellbeing
