

New version of the "Industrial HiVision" software from Hirschmann

PRESSRELEASE

Integration of network management in SCADA systems

Hirschmann Automation and Control GmbH, Neckartenzlingen, is pleased to announce a new version of its "Industrial HiVision" network management software - Operator Edition 3.0. With this latest release, information such as the device status, link status or network load can be integrated directly into SCADA systems via an OPC Data Access 2.0 server. No specialist SNMP knowledge is required. The overall status of the network or sub-networks can even be displayed with just a single OPC variable. To simplify the integration further, a graphical representation of the network topology can be embedded into SCADA systems via an ActiveX control, included in the scope of delivery.

The new software, which is available for both the Windows 2000/XP and Linux operating systems, also supports automatic detection of network topology via LLDP (Link Layer Discovery Protocol). This feature considerably reduces the initial configuration work. As a result, network components and end devices such as PLCs or I/O components can be displayed and monitored within minutes of installing the software.

Since the license fee depends on the number of supervised IP addresses, "Industrial HiVision" is also a cost-effective solution for smaller networks. To see for yourself the benefits of Industrial HiVision 3.0, download a thirty day trial version from "www.hirschmann.com".
