

EXPLORE

INFINITE POSSIBILITIES IN VIDEO ANALYTICS

Looking for smarter video solutions? Neugent offers a full range of smart video monitoring, analysis and integration solutions to address the market need for scalable solutions that will ease the growing labor cost associated with video monitoring and increase total efficiency and accuracy of video surveillance.

In addition to standard digital video monitoring, Neugent's powerful suite of intelligent digital video technologies provide streamlined threat detection, alert notification based on user-defined criteria, behavior analysis, and alert responses/escalation methods.

Full integration with the LX8000 DVR Series effectively eliminates the operational issues associated with standalone intelligent video applications.

Receive alerts if suspicious objects appear in the camera's field of view.

Receive alerts if people enter unauthorized areas.

Linux SmartDetect DVR Series

Neugent's Linux LX8000 SmartDetect DVR application, which is designed to run on Neugent's powerful hardware MPEG4 DVR capture cards, offer two key features: left/abandoned-object detection and removed/missing object detection.

Neugent's Linux LX8000 SmartDetect DVRs are intended for use mainly for the transportation, real-estate and retail industries. They can be used for tailored alarm generation when an object is left in a busy scene (such as a bag in an airport or subway station) or when an object is suddenly removed from its place (such as missing paintings/thefts in art galleries, schools and museums). Illegal parking violations and roadblocks can be detected, as well. Motion detection settings allow you to define areas (or zones) on the screen where you want to detect any visual changes. Once a change is detected, alert notifications can be sent to multiple destinations, both on and off site via email or SMS. Automatic live view capability via 3G for mobile phones is also available.

"With the Linux LX8000 SmartDetect DVRs, you can streamline security operations, make better use of resources and reduce overall expenditures."
