

Secvest 2WAY, the first alarm system that actively protects against break-ins

Secvest 2WAY is the fourth generation of the Secvest radio alarm system. With an innovative backlight status display, bidirectional control elements, 48 functions and active break-in protection, it sets a totally new benchmark in functionality and design. Secvest 2WAY will be exhibited for the first time at the Security fair in Essen.

In addition to its several opportunities to detect an alarm, Secvest 2WAY is the first alarm system with active break-in protection. Therefore in addition to the alarm technology detectors, the new ABUS FTS 96 E radio window security can also be integrated into Secvest 2WAY. In an attempted break-in, confronting any burglar will be FTS 96 E and its two massive steel bolts providing strong mechanical resistance, whilst Secvest 2WAY will already be sounding the alarm at the time of the first break-in attempt - and long before the mechanical safeguard has been fully compromised. Mechanical and electronic home security can be seamlessly integrated here into a unified security plan.

Secvest 2WAY is supplied in elegant white and scores highly for its ease of use. In addition to the bidirectional radio remote control, which displays the current status of the control unit through 4 integrated LDS, it contains the following functions - LCD display with scroll option, voice-activated status indicator and the option to conveniently switch the system to sharp/fuzzy via a chip key or the Secvest radio cylinder.
