

THE NEW DIRECTFLUSH WC

Design and function in one

There are three good reasons for choosing the new DirectFlush WC from Villeroy & Boch:

1. Hygiene
2. Efficiency
3. Design

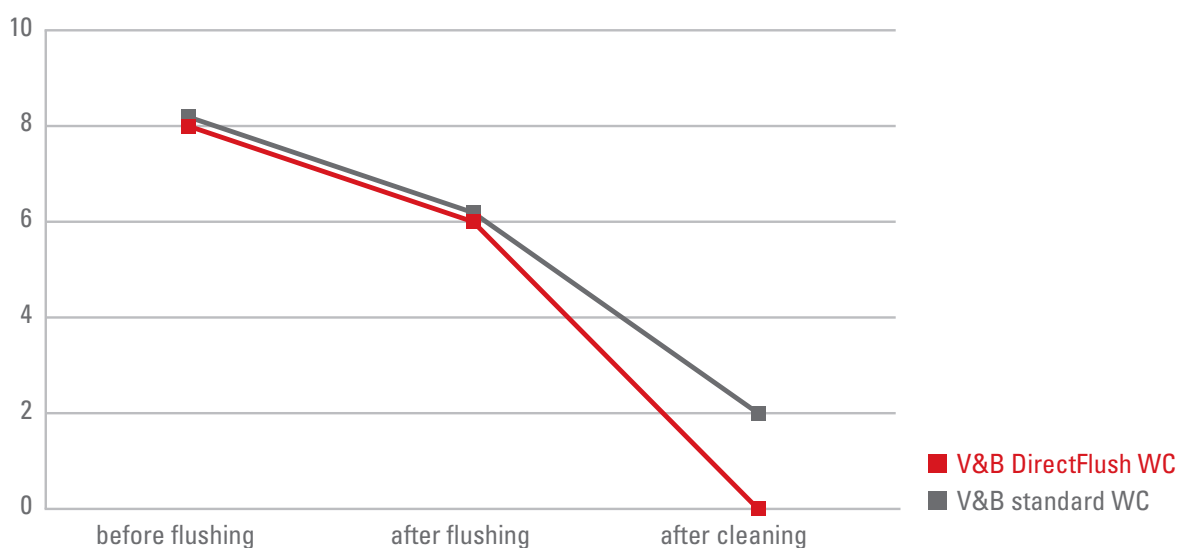

Find out more about the Omnia Architectura DirectFlush live at: www.villeroy-boch.com/directflush

1. Hygiene: open, fully glazed water rim cleans more quickly

- The design of the DirectFlush WC makes it quicker to clean, saving money and time. It is thus ideal for private households and public buildings alike.
- Proven to be hygienically clean: the “IZORE – Centre for Infectious Diseases Friesland” in the Netherlands, one of Europe’s leading hygiene institutes, confirms that, thanks to its optimised design, the rimless Villeroy & Boch DirectFlush WC is virtually germ-free after cleaning.

2. Efficiency: flushes economically with 3/4.5 litres

- Low water consumption of 3 / 4.5 litres to flush the entire bowl is standard for Villeroy & Boch. This is better than required by the norm: The standard EN 997 permits an unflushed area of 85 mm measured from the upper edge for rimless WCs. DirectFlush flushes the entire inner bowl!

3. Design and function

- The Villeroy & Boch DirectFlush WC combines practical advantages with timeless design.
