

## 30" /40" TFT – Monitors for Automation and Multimedia

### 30 and 40" TFT monitor

The unit described in this data sheet is a microprocessor controlled TFT video monitor. It is intended for applications with higher requirements for durability, brightness and extended use. The modular design of the integrated PC box provides outstanding flexibility and compatibility with the multimedia applications of the future.

With an approximate diagonal screen size of 100 cm, a maximum resolution of 1280 x 768 pixels, a 16:9 aspect ratio, wide viewing angles in all directions, and over 16.7 million colors, this is the ideal multimedia monitor or flat panel display. The picture impresses with its brilliant sharpness, brightness and very high contrast.

The housing is an extremely compact, solid metal construction, manufactured specially for use in airports and railroad stations. The slim, ergonomic and compact design also makes deployment as a stand-alone monitor possible, for example as a ceiling or wall mount in passenger waiting areas. The surface is scratchproof, easy to clean and available in a range of RAL color tones.

The screen has anti-reflective coating on both sides to protect the mechanical operation of the TFT, increase the contrast and provide the necessary seal against dust and moisture.
